

Electronic pressure tester ECT 700

MOTOMETER

Measuring, Evaluating, Archiving.

Different independent pressure systems with different pressure ranges required so far multiple test units in workshops.

MOTOMETER offers with the pressure tester ECT 700 an innovative and reliable complete solution for the modern workshops, which measure, evaluate and archive digitally different pressure systems up to 70 bar.

Following pressure measurements can be carried out with the handheld unit ECT 700:

- Measurement of compression pressure
- Pressure loss test at engines
- Real time pressure test e.g. Pressure maintaining tests

The currently measured value is shown on the display of the ECT 700 during the test.

Afterwards the total test result can be digitally saved, archived and printed by using the evaluation software. The motor specific adapters of our approved recording compression tester can continue to be used.

Further features

- Reliable and precise test results through electronic measured value recording
- Evaluation and archiving of measurement data
- Clearly structured menu
- Digital display allows easy reading of measuring values
- Display, print out and archiving of the measurement data
- Robust and water protected casing
- Display of battery voltage
- Further accessories offer additional options at any time
- Integrated automatic shutdown device
- Measured values units (bar, psi and kPa)

Technical data

- Measurement range: – 4 up to + 70 bar (0..1015 psi)
- Measuredness: +/- 1 %
- Measuredness pressure loss: +/- 20 mbar
- Interface: USB 2.0
- System requirements: Windows 2000 / XP / Vista / 7

Electronic pressure tester ECT 700
